SUPPLEMENT

SOURCE

1. Professor Schütz, leading expert on a special smelting process for steel, was arrested and deported to the Black Sea area.
2. During the war, Schütz directed the smelting process for an especially hard steel, made according to a Japanese formula, which was used for armor-piercing ammunition. Although the formula is said to be known to the Russians, they have not yet achieved the necessary hardness in their steel tests, supposedly because mistakes were made in the mixing of the components and the smelting process.
